BX-31 Packing Instructions

Shipper must ensure compatibility with all packaging materials and follow all appropriate transport regulations. For air shipment of liquids, containers must meet pressure, secondary closure and leak-proof liner requirements (See IATA DGR Section 5 / ICAO TI Section 4 / US 49 CFR 173.27). Deviations from any part of this instruction may void the UN certification. Please consult 49 CFR for United States record retention requirement. If further information is required, contact ICC Compliance Center at 1-888-442-9628.

Disclaimer: Boxes sold on their own without relevant components do not meet the UN performance packaging requirements as they were tested. All boxes must be used with kit components to meet UN markings on outside of cartons.

<td>2.1</td>
</tr>
</tbody>
</table>

Assembly
1. Fold in bottom flaps. Seal center seam with one (1) strip of 3M #305,48mm clear tape. Extend tape beyond each edge by at least 2”.
2. Place one foam pad in bottom of box. (Figure 2).
3. Do not completely fill can. Leave sufficient space in can for liquid expansion. Using a paint can closer, secure lid completely and evenly on can.
4. Secure four (4) metal clips spaced evenly apart or one (1) Ringlok® on can/lid assembly. Make sure Ringlok® snaps completely and evenly in place (see Page 2 for Ringlok Instructions). For metal clips, make sure "double hook" end of clips grip on outer rim of can.
5. Place can in an upright position in box/foam assembly (Figure 3).
6. Place top foam pad over can assembly (Figure 4).
7. Fold top flaps of box and seal center seam as described above in step 1 (Figure 5).
8. Mark and label each package in accordance with the appropriate regulations. At least one (1) set of UN markings and two (2) orientation arrows must be shown on each package.
Ringlok® Instructions
(RL-CJ7 & RL-CJ8)

ASSEMBLY

1. Place the Ringlok® on the paint can.

2. Using the palms of both hands, concentrate on one end of the ring and press firmly. (This will result in the ring hooking the outer rim of can.)

3. Using palms of both hands, continue to “firmly” press the ring into place and work both hands around the perimeter, until the ring is completely applied.

4. The ring is properly applied when the ring hooks below the can’s rim completely around the perimeter.

REMOVAL

1. Pry the ring in an upward position using two thumbs concentrated on one area until the ring releases from the can’s rim.
